

Does HYDROSTOP Rigid Core LVT expand and contract like Flexible LVT? What do I need to know about using transitions and spacers?

Good news! Consider that all Rigid Core LVT expands and contracts at about half the rate of flexible LVT and this is a Seamless Floor: it can be installed on large areas without transitions moldings.

If HYDROSTOP Rigid Core LVT is 100% waterproof, can I use it outdoor?

Rigid core flooring will not be harmed by water when exposed to it from spills and normal cleaning. However use of the flooring outside exposes it to other elements which will decrease the flooring time-life. If install outdoor, should be always below a roof over the whole area and tents.
